

26—Chafing-Dish or Tea Table

A high school problem. Make of oak, preferably, and finish in brown. The doors may be made solid if well seasoned wood is used. The table will be quite as satisfactory in appearance if the shelf is omitted. The doors when let down into the horizontal position, serve as shelves for dishes. The ends of cross-bar supports for shelf are recessed into inside corner of legs and put into position as table is glued up.

27—Three-Panel Screen

Poplar or oak will be suitable for this piece. In the construction of this project different members of the same class may be put to work on the three different panels. If burlap or leather is used for the upper panels it may be fastened on a pine frame to set in flush with rails and stiles, or the material may be fastened on the outside with large-headed tacks. An opportunity is here given for some originality in design as these upper panels may be made of embossed or tooled leather, or stenciled burlap. If the wood is oak, some brown or dark green finish will be good.
